

Lesson 3:

Algorithms

Aims

- ② To understand what an **algorithm** is.
- ② To create a computer program that follows an **algorithm**.

Success Criteria

- ② Children can explain that an **algorithm** is a set of instructions.
- ② Children can describe the **algorithms** they have created.
- ② Children can explain that for the computer to make something happen, it needs to follow clear instructions.

Vocabulary

- ② Have a go at the [Coding Vocabulary Quiz](#).
- ② What can you remember?

Algorithms

- 2 In lesson 1, your teacher was a programmer and you were all robots that had to follow instructions that were written as symbols.

- 2 In computing, a set of instructions is called an

Algorithm

Algorithms

An **algorithm** is a precise step-by-step set of instructions used to solve a problem or achieve an objective.

② The **algorithm** is **not** the same thing as the code.

② This is the **design**.

② This is the **algorithm**.

1. Tuna should swim left.
2. Clown fish should swim right.
3. Trout should swim right.

② This is how the algorithm could be represented in **code** using 2Code.

② In other programming languages, the code to program the same algorithm would look different. Here is the same algorithm programmed in a language called JavaScript.

```
Tuna.left();  
Clown.right();  
Trout.right();
```

Activity 1: Lego Models

- ② Look at the two models.
- ② Which is correct?
- ② The correct answer could be,
'They are both correct.'
How can we know which is correct?
- ② There is no such thing as correct when building creatively.
- ② You might ***prefer*** one over the other, but both are 'correct'.

Activity 1: Lego models

- ② Look at the two models again.
- ② Now, look at [the instructions](#).
- ② Which model is built the correct way now you have seen the instructions?
- ② Now, you **can** answer the question.
- ② The step-by-step instructions are the **algorithm** for building the model.
- ② Why is it important to follow the steps in the **algorithm** in order? Now, look at the instructions.
- ② What would happen if we completed the **algorithm** in a different order?

Making a Computer Program

- ② When making a computer program a coder will:
- **Design** a the visual look of the program.
 - Write the **algorithm** that would make the program accomplish its aim.
 - Create the design on the computer.
 - Write **code** that instructs the computer in line with the **algorithm** and make the program work.
- ② Can you **predict** what will happen when this program is **run**?
- ② Which plane will take off first?
- ② What are the **events**, **objects** and **actions** you would need in 2Code to program this algorithm?

② This shows the **design** and the **algorithm**.

Task: To make an airport program where the planes take off.

- 1) Click purple plane to make it take off.
- 2) Click yellow plane to make it take off.
- 3) Click green helicopter to make it take off.
- 4) If green helicopter crashes with yellow plane; make crashing sound.
- 5) Optional step: If green helicopter crashes with yellow plane make it change direction

Activity: Air Traffic Control

- 2 Open [Air Traffic Control](#), click on stage 1, [watch the video](#) and add code for stage 1 together.

- 2 What is the **event**, **object**, **action**?
- 2 Click on run  to test the **code** and see if it works.
- 2 Click on stop and then **run** again, notice how the **code** goes orange when it **executes**.
- 2 Click on the plane and notice what happens – which bit goes orange?
- 2 Remember to click on stop to make changes or Next Challenge when you have been successful.

Activity: Air Traffic Control

2 Have a go.

The screenshot shows a task card titled "2Do: Air Traffic Control" with a purple airplane icon. The description reads "Program the planes to take off." The card is set by "Mrs Runham" and has "No due date". A purple "Start" button with a play icon is at the bottom, and a large blue arrow points to it from the left.

2Do: Air Traffic Control

Set by: Mrs Runham

Program the planes to take off.

No due date

 Start

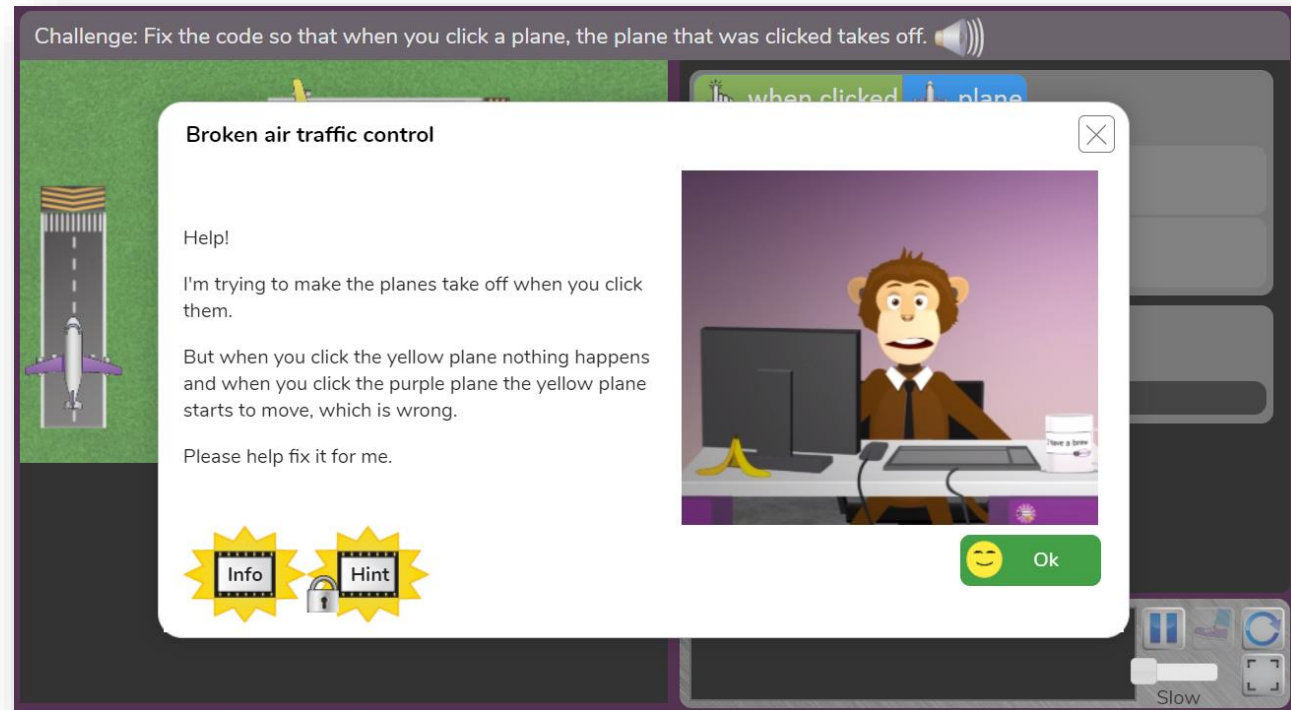

- 2 Open Air Traffic Control from your 2Dos and complete Stages 1 and 2.
- 2 Notice how the **code executes** when you click on **run**  .

Tel: +44(0)208 203 1781 | Email: support@2simple.com | Twitter: [@2simplesoftware](https://twitter.com/2simplesoftware)

Activity: Air Traffic Control

- 2 In Stage 3, the program does not work the way the Coder wants it to.
- 2 We need to **debug** the code.
- 2 What is **debugging**?

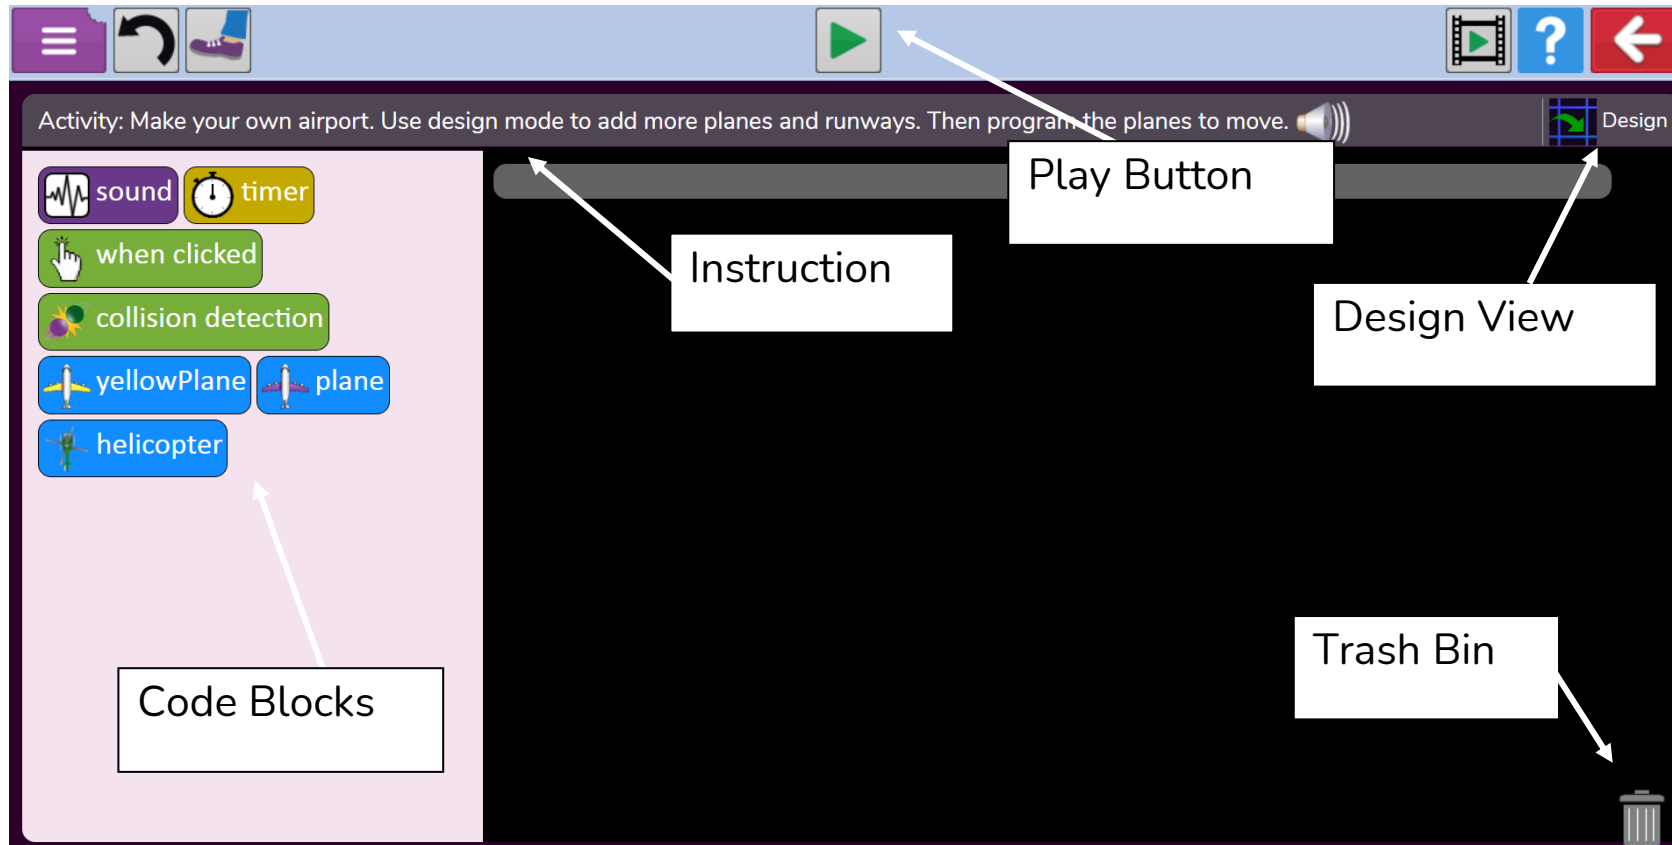

- 2 Can you help the Code Monkey fix the code that isn't working properly?

Need more support? Contact us:

Tel: +44(0)208 203 1781 | Email: support@2simple.com | Twitter: [@2simplesoftware](https://twitter.com/2simplesoftware)

Air Traffic Control

2 Can you explain what all these different parts of the code view do?

Need more support? Contact us:

Tel: +44(0)208 203 1781 | Email: support@2simple.com | Twitter: [@2simplesoftware](https://twitter.com/2simplesoftware)

Air Traffic Control

- 2 This is the 'Design' for Air Traffic Control final stage. This is the **scene** that has been made in 2Code.
- 2 What is the **background** and what are the **objects**?

- 2 The grass is the **background**.
- 2 The aircraft and runways are the **objects**.

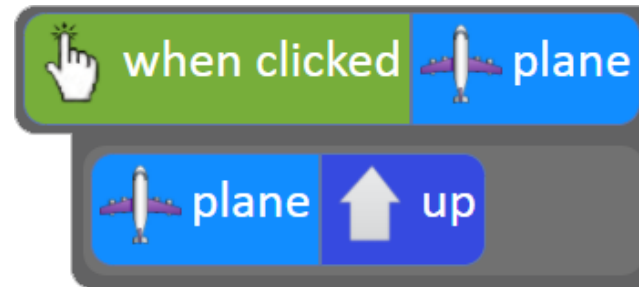

- 2 Remember our program on slide 9: Is it like the 2Code design?

Algorithm → Code

- ② The task outlines what the program should do.
- ② The **algorithm** gives us the step by step instructions for how to achieve this.
- ② We need to program this algorithm using code.
- ② Look at the algorithm.
- ② It starts with 3 **click events**.
- ② Open the [final stage of Air Traffic Control](#) and add the code for the first one together:

Task: To make an airport program where the planes take off.

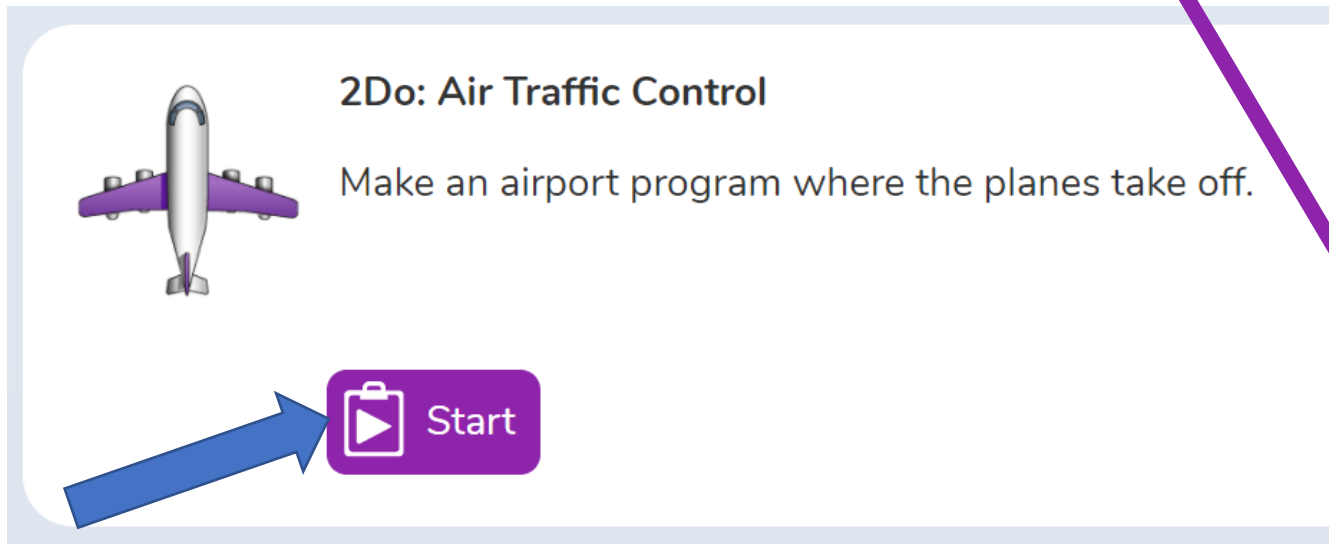

- 1) Click purple plane to make it take off.
- 2) Click yellow plane to make it take off.
- 3) Click green helicopter to make it take off.
- 4) If green helicopter crashes with yellow plane; make crashing sound.
- 5) Optional step: If green helicopter crashes with yellow plane make it change direction

Need more support? Contact us:

Tel: +44(0)208 203 1781 | Email: support@2simple.com | Twitter: @2simplesoftware

Activity 2: Air Traffic Control

- 2 Continue through the Air Traffic Control 2Do until you get to the final stage.
- 2 In the final stage, have a go at adding the correct code to make the first 3 steps of the **algorithm** work.

Task: To make an airport program where the planes take off.

The diagram shows a hand-drawn airport scene. On the left, a purple plane is on a runway. On the right, a yellow plane is on a runway. Below the yellow plane, a green helicopter is shown. The labels 'purple plane', 'yellow plane', and 'green helicopter' are written next to their respective icons.

- 1) Click purple plane to make it take off.
- 2) Click yellow plane to make it take off.
- 3) Click green helicopter to make it take off.
- 4) If green helicopter crashes with yellow plane; make crashing sound.
- 5) Optional step: If green helicopter crashes with yellow plane make it change direction

Saving Your Code

Why is saving important?

- ② If you accidentally close the program, you will lose your work if you haven't saved.
- ② Save each time you make a change and test it.
- ② You will always have a good version to go back to.

How do you save? Save your program now.

Need more support? Contact us:

Tel: +44(0)208 203 1781 | Email: support@2simple.com | Twitter: [@2simplesoftware](https://twitter.com/2simplesoftware)

Air Traffic Control

- ② Read step 4 of the **algorithm**.
- ② How will the computer know when the helicopter has **collided** with the yellow plane?
- ② What **event** will we need?

Collision detection.

- ② What do we want to happen when the helicopter hits the yellow plane?

Need more support? Contact us:

Tel: +44(0)208 203 1781 | Email: support@2simple.com | Twitter: @2simplesoftware

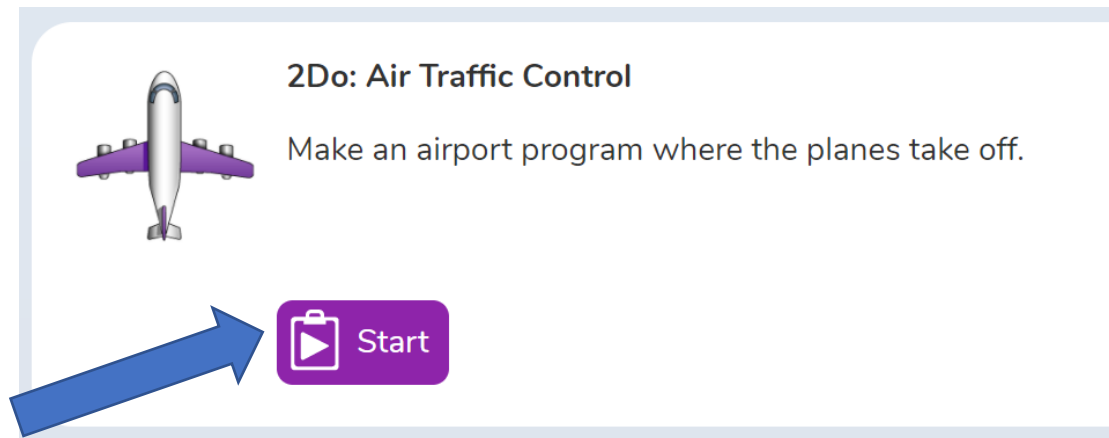

Task: To make an airport program where the planes take off.

- 1) Click purple plane to make it take off.
- 2) Click yellow plane to make it take off.
- 3) Click green helicopter to make it take off.
- 4) If green helicopter crashes with yellow plane; make crashing sound.
- 5) Optional step: If green helicopter crashes with yellow plane make it change direction

Extension: Air Traffic Control

- ② Have a go at adding the correct code to make the 4th step of the **algorithm** work.
- ② Can you program the optional final step?
- ② If you finish, see if you can add more **objects** to the **scene** and further develop the program.

Task: To make an airport program where the planes take off.

- 1) Click purple plane to make it take off.
- 2) Click yellow plane to make it take off.
- 3) Click green helicopter to make it take off.
- 4) If green helicopter crashes with yellow plane; make crashing sound.
- 5) Optional step: If green helicopter crashes with yellow plane make it change direction

Need more support? Contact us:

Tel: +44(0)208 203 1781 | Email: support@2simple.com | Twitter: [@2simplesoftware](https://twitter.com/2simplesoftware)

How Did You Get On?

Task: To make an airport program where the planes take off.

- 1) Click purple plane to make it take off.
- 2) Click yellow plane to make it take off.
- 3) Click green helicopter to make it take off.
- 4) If green helicopter crashes with yellow plane; make crashing sound.
- 5) Optional step: If green helicopter crashes with yellow plane make it change direction

- 2 Did you manage to turn the **algorithm** into code?
- 2 Did you have time to further develop the airport program?
- 2 Work with a partner, read through each other's code and **predict** what will happen when you **run** the program.
- 2 Save your final program and hand in your 2Do.

Review Success Criteria

- ② I can explain that an **algorithm** is a set of instructions.
- ② I can describe the **algorithms** I created.
- ② I can explain that for the computer to make something happen, it needs to follow clear instructions.
