

Resource 2

Look at the resource below, which shares how some people feel about using an e-scooter.

Who do you think feels they will benefit from using an e-scooter?

I need a van full of tools and equipment for my job so an e-scooter would not work for me. It would be great if others could use them though as it would mean less traffic, reducing congestion and journey times!

Jessica

I live in a rural area and need to travel 16 miles to work. There is no public transport where I live so I always travel by car. I don't think an e-scooter would benefit me, in fact, I think having them on the road would be a danger.

Solomon

An e-scooter would be great to use not only because it will help improve local air quality, but it will also be good for my balance and movement! I would only use it on a fine day, not if it was cold and wet!

Grace

I use my electric wheelchair so I wouldn't need an e-scooter.

Harris

Because the e-scooter is portable, it means I would easily be able to use it and a combination of other public transport to go anywhere in the city.

Wayne

I have three children to transport to school each day so an e-scooter would not help me.
